system  
architecture

Developed main  
page and  
implemented design

# System Description

- **The purpose**  
The system designed to enable group of friends and communities to have friendly bets between each other and have fun!
- **The situation today**  
Today, most of the apps found in the app stores are apps that deal with gambling for money between a private person and some body and there is no platform that allows you to organize an intervention between a group of friends for fun and not for money and for any topic and not just gambling (sports, etc.).
- **What does the system contribute to the situation today?**  
Unlike common gambling apps, our app is designed for friends to organize free activities beyond money and sports, this app turns everyday moments into shared experiences, fosters connections and strengthens friendships. Join us for an app that will add interest to any group of friends.

# Central Requirements

1

## Registration and login

Functional Requirement.

2

## Creating a bet

Functional Requirement.

3

## Bet management

Functional Requirement.

4

## Joining bet

Functional Requirement.

5

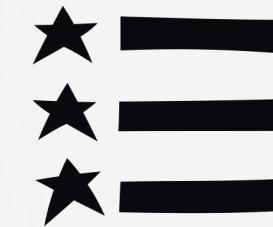

## Points management

non-functionality

6

## Profile

Functional Requirement.
